PCSchool Help - now works with IE7

Schools using Internet Explorer 7 have encountered problems when printing documents from the PCSchool Help file. This bug has now been fixed in the latest PCSHelp document.

Download the updated PCSHelp file from:

www.pcschool.net/download/PCSHelpV3.zip

Open the PCSHelpV3.zip folder and copy the PCSHelp.chm file inside into your PCSchool\Help folder on the server. This should then update to all the local machines next time users log on.

If you use a *Terminal Server* for PCSchool the PCSHelp.chm file will need to be copied to both the PCSchool\Help folder on the server AND the Program Files\PCSchool\Help folder on each of the local machines.

The screenshot shows three overlapping Windows Explorer windows. The top window, titled 'Help', shows the local machine's file system with the address bar set to 'C:\Program Files\PCSchool\Help'. The middle window, also titled 'Help', shows the server's file system with the address bar set to 'Y:\Program Files\PCSchool\Help'. The bottom window, titled 'PCSHelpV3.zip', shows the contents of the zip file, including 'PCSHelp.chm' and 'Instructions for e...'. A green callout box with the text 'Copy / extract the PCSHelp.chm file from the PCSHelpV3.zip folder onto the server (and local machine if using a Terminal Server)' has arrows pointing to the 'PCSHelp.chm' file in the zip window and the 'PCSHelp.chm' file in the server window.
