'Fit Only' Function in Timetable Construction

A new function has been added to Timetable Construction.

Path: Timetable—Timetable Maintenance—Construction—Create Lines—Initial Solution tab

The new function 'Fit only—Do not seek new line set' allows schools to find the best fit based on the existing saved line set.

To get this latest function you will need to download the Post Conference Update from our website, or use the following link: www.pcschool.net/download/Conf2008Update.zip

This will result in currently saved student subjects and their associated line allocations being read into initial solution

This will result in currently saved fixed lines being read into initial solution

This will result in all subjects not currently in a specific stored fixed line being flagged as excluded from that line. This can be over-ridden during the fit.

2GTY was not preset in lines 1,2,4,5, or 6 hence the program has them flagged as Nil Classes

2GTY was preset in line 3

Save Fit but do not save subjects flagged and "Nil Maximum classes" back to the fixed lines. Students allocated to such classes will be saved

Although flagged to "Avoid" the program has no alternative but to place a student in this Subject and Line. While the Max Grp is set to Nil this subject will be saved as a "Clash" provided the checkbox is ticked.

NOTE: Please ensure all PCSchool updates are performed by authorized persons only (eg. IT or System Administrator personnel).
